

BOSCH
Invented for life

*Wireless and Fixed IP Alarm Communicator
with direct integration to Bosch Solution 2000/3000 panels*

Empower your Bosch panels.
Promote your brand.

BMC-3G. Built for Bosch.

Multicom BMC-3G

3G, IP and Voice Dual SIM Communicator

The BMC-3G is designed to seamlessly connect with Bosch 2000/3000 alarm panels. Access to all the Bosch panel features are available via the TechTools web portal, which you can log into at - techtools.suretek.com

Offering full redundancy so that if one path fails, the BMC-3G automatically transmits across one of the remaining paths providing constant reliable communication.

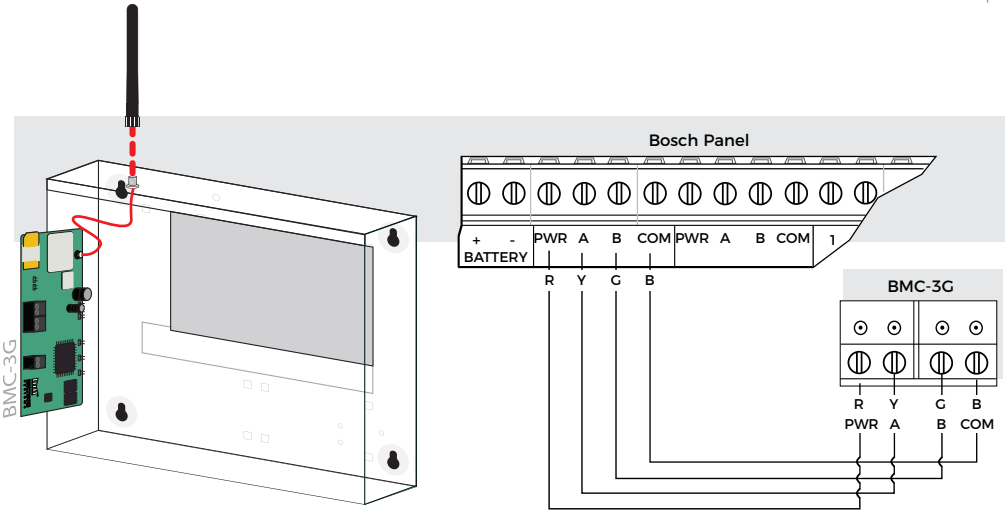

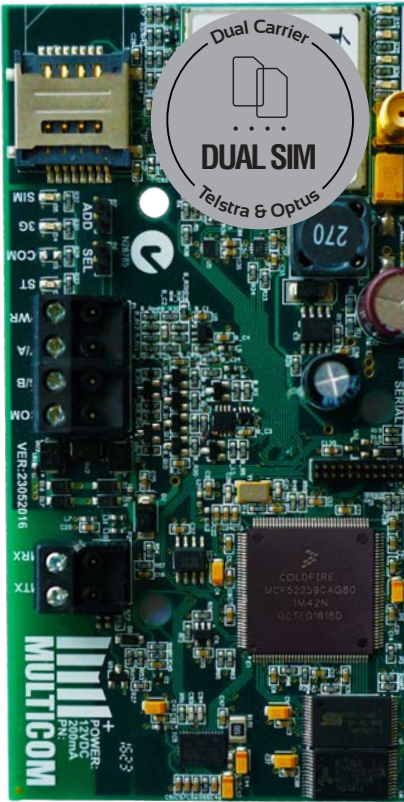

With Dual SIM cards, the BMC-3G doubles the redundancy on 3G, IP and Voice by utilising 2 separate carrier networks.

The BMC-3G detects issues & outages on the active carrier network and automatically switches to the inactive SIM.

- The BMC-3G is the ideal offering for:
- ✓ Bosch alarm panel installers
 - ✓ Commercial and industrial properties
 - ✓ Small to medium businesses
 - ✓ Large residential estates and campuses
 - ✓ Sites that do not have a fixed phone line

PRODUCT SPECIFICATIONS

Comm. Paths	3G/IP Telstra 3G/IP Optus 3G Voice Telstra 3G Voice Optus PFP Poll fail Telstra PFP Poll fail Optus	Quad GSM band Options	850/900/1800/1900 MHz Emergency Phone Backup (PSTN to GSM Conversion)
Reporting Format	Contact ID Surepoll PFP	Power Supply Approval	12V >300mA N28785
Inputs	1 x 24hr alarm input		

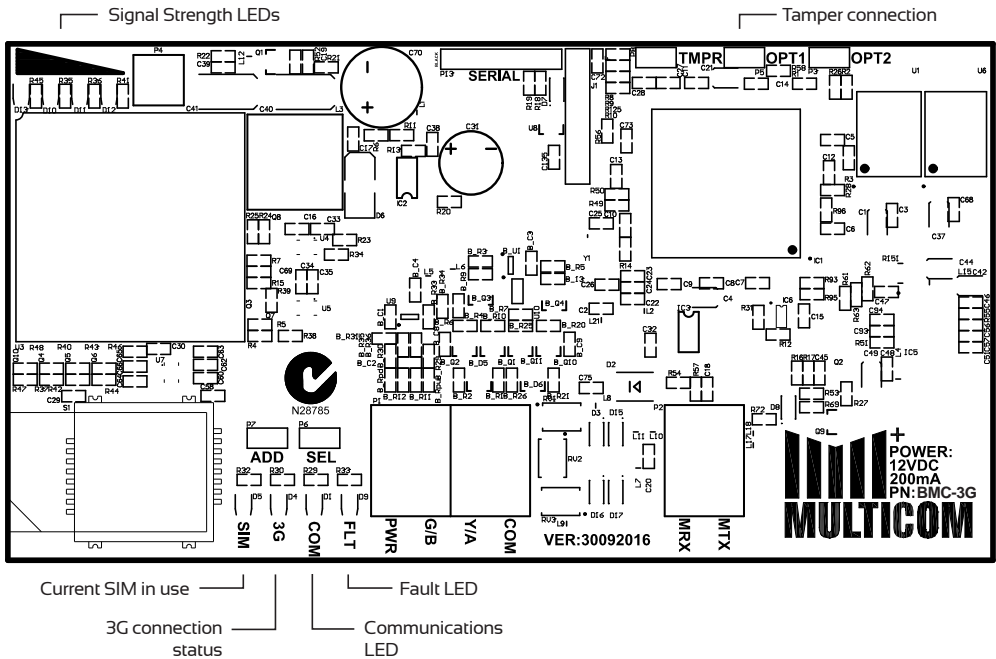

Mounting

The BMC-3G is designed to fit easily inside an existing alarm panel housing. The fly lead and antenna have been included for faster installation.

Connection

The BMC-3G connects directly to the Bosch Solution 2000/3000 panel as shown in the above wiring diagram.

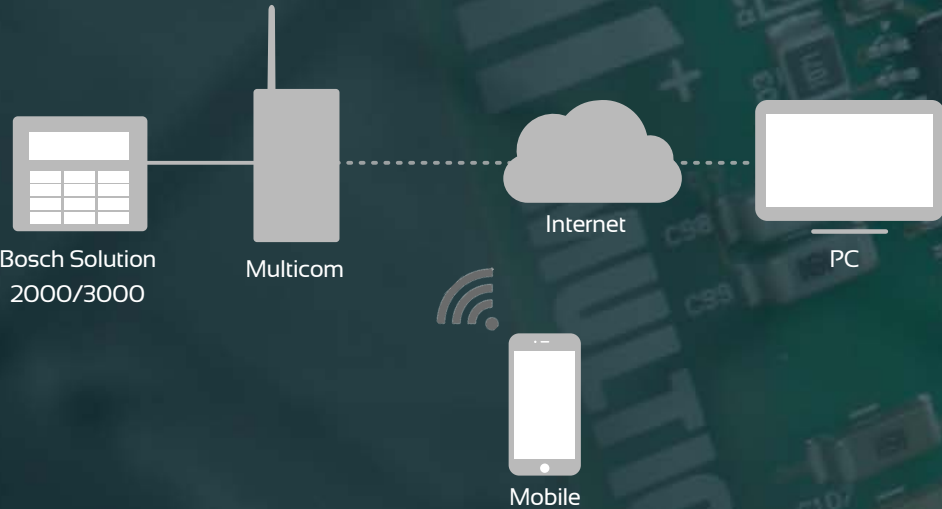

BMC-3G is available from your local authorised Bosch distributor

Bosch panel programming via a web browser

TechTools website let's you locally or remotely program your Bosch Solution 2000/3000 panels using a standard web browser.

Guaranteed Alarm Delivery

The BMC-3G connects to Surepoll, the only managed private network in Australia that's designed for guaranteed alarm delivery.

✓ More Secure

The Surepoll network guarantees 99.99% alarm delivery. All alarm transmissions fully encrypted and deciphered at the monitoring centre.

✓ More Paths

As well as Dual-SIM 3G, GSM and IP, Surepoll also offers PFP, a proprietary Poll Fail Protocol that verifies active communication paths in the event of signal dropout.

✓ Future-Proof

Fully compatible with all future technologies and equipped to handle all major infrastructure changes including fibre, NBN and 4G.

✓ More Investment

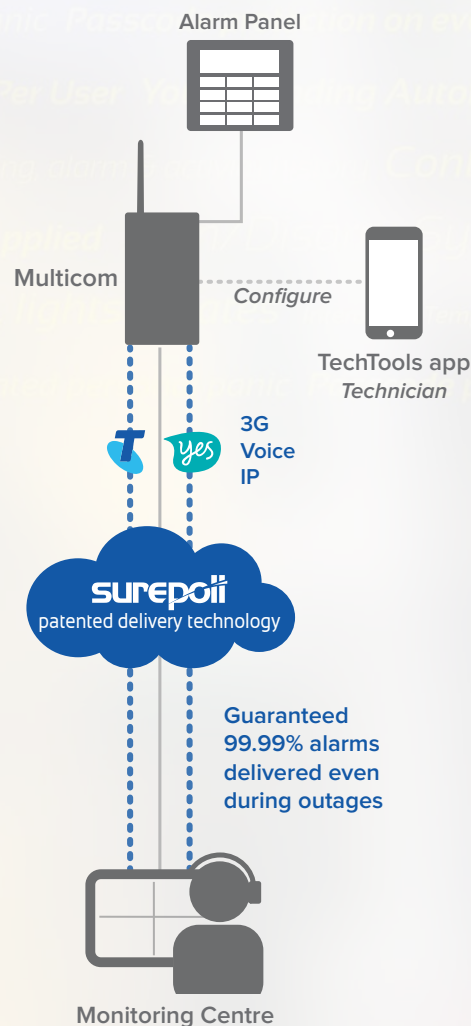

With Optus and Cisco as network partners and over \$1,000,000 spent in R&D; Multicom communicators offer unrivalled support and network uptime through a dedicated data centre, manned 24/7.

✓ More Options

Polling plans ranging from 20 seconds to 24 hours, adapting to your client's circumstances and level of risk.

✓ More Compliant

Complies with Australian/New Zealand standards AS 2201.5 2008.

Superior Technology

✓ Dual Sim Technology

BMC-3G has two SIM cards, doubling the redundancy on 3G and PFP by utilising 2 separate carrier networks.

BMC-3G can detect issues & outages on the active carrier network and automatically switch to the secondary SIM. This technology allows BMC-3G to eliminate service outages due to a single carrier's network.

✓ No fixed line required

Traditional alarm systems weren't designed to work without a fixed phone line, but BMC-3G provides communication capabilities that will transform your old system to work with new transmission technology.

BMC-3G is perfect for anyone who wants to switch to the NBN or a VoIP-only service provider for their home or business.

✓ Designed for Bosch

BMC-3G is compatible with the Bosch Solution 2000/3000 alarm panels. It not only quickly and conveniently plugs into the existing panel, it also converts it to a Class 4 system.

BMC-3G was co-developed with Bosch to be discreet - compact enough to conveniently fit inside your existing alarm's housing.

You are always in control

AlarmLINK for iPhone and Android devices lets end customers connect and control their home and business alarm system from anywhere in the world. It lets multiple authorised users, control the Bosch alarm system. Multiple sites can be setup and instantly accessed. Connection to your Bosch panel is protected via permissions-based security as well as an optional passcode.

Polling for greater security

Polling authenticates your alarm system's integrity, which means if your alarm system fails or has been tampered with in some way, your monitoring centre will know about it almost immediately. Polling is like security for your security system. If polling fails on the default 3G network, BMC-3G transparently switches to PFP, a patented proprietary polling method exclusive to Suretek.

Management Apps

Two powerful apps have been provided for both installers and users of the BMC-3G alarm communicator.

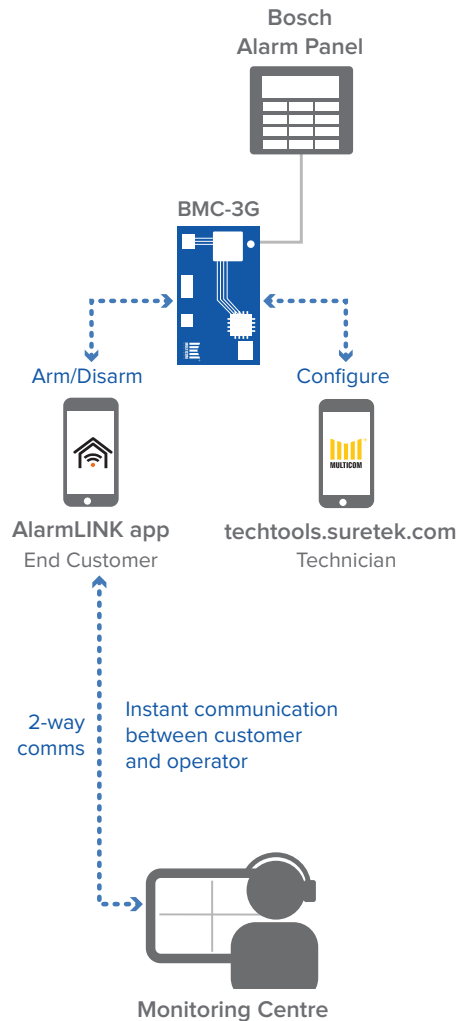

TechTools provides the technician with full management of the BMC-3G, while AlarmLINK provides users access to alarming events, alarm history and two way communication with the monitoring centre.

TechTools

Developed for the technician, this app enables fast setup and configuration of the BMC-3G. Ongoing management of the device can be done locally or remotely from the tech's mobile device. All of the technicians device installations are stored in the app for easy multi-site maintenance.

AlarmLINK

This gives the end customer full access to the alarm panel via their mobile device. The app allows instant arming and disarming of the alarm panel. It also keeps the user up to date with the latest alarm events. In the case of an important alarm event the central monitoring centre operator can send instant alerting to the app with an action request.

For the End User

AlarmLINK

End User App

For the Technician

TechTools

Technician App & Website

Download
> bit.ly/multicom

The apps deliver a seamless experience for both customers and installers. Full interactivity from any mobile device gives consumers instant access on demand from anywhere in the world - all you need is an Internet connection

Offering end users arm/disarm plus a full suite of additional services and allows technicians to promote their business at the same time.

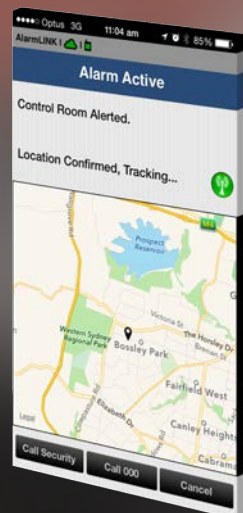

Virtual Keypad
control any alarm system

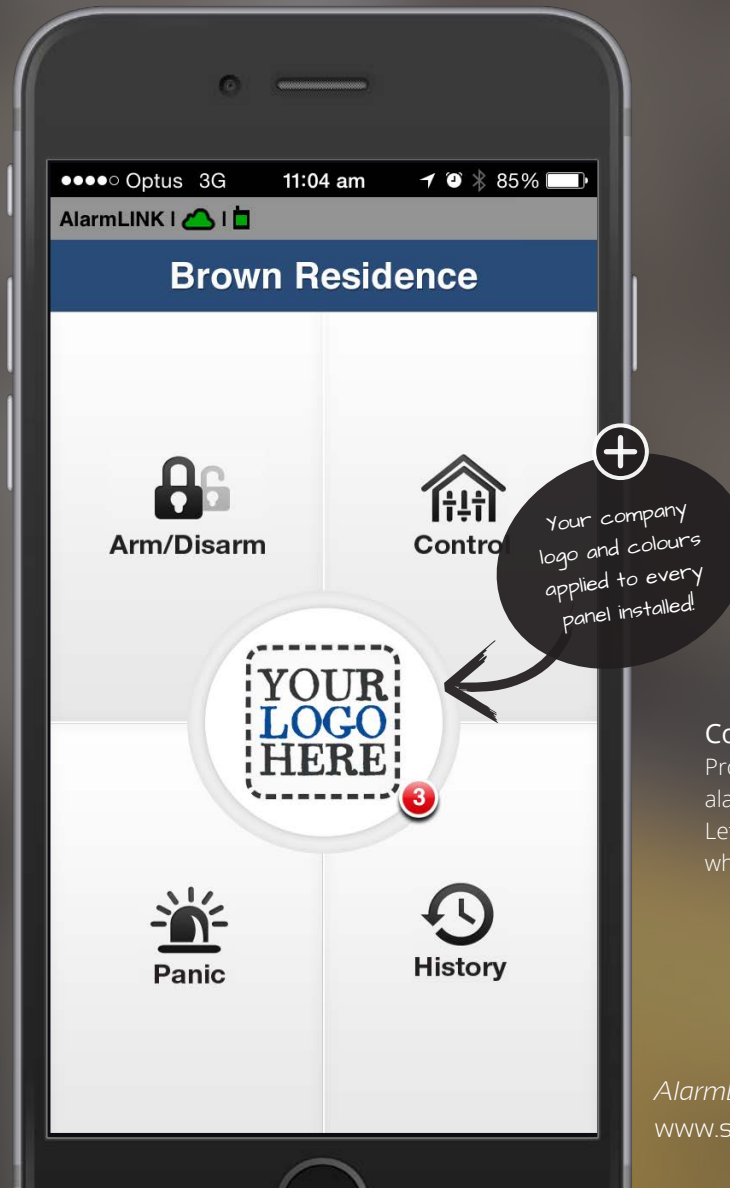

Remote Arm & Disarm

Empower end customers with one-touch remote arm and disarm of their existing alarm system.

Personal Panic Alarms

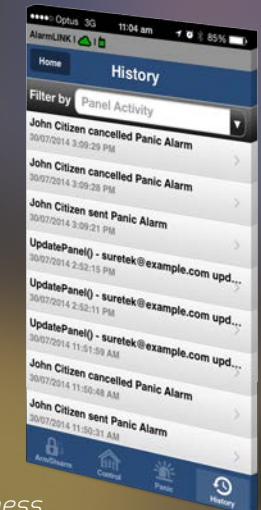

Offer personal protection - panic alarms generated in AlarmLINK are delivered to your monitoring centre with your customer's geo-location.

Arm/Disarm Sync
patented sync function

Complete History

Provide full transparency with alarm, poll and activity history. Let's the end user discover who uses their alarm & when!

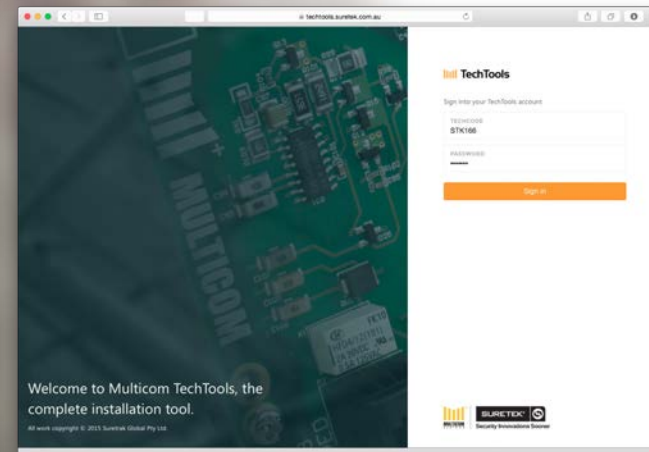

AlarmLINK can help your business

MULTICOM TechTools

The complete installation tool for technicians.
Install and configure devices in the field in real-time.

- ✓ Log in to your customer's devices from anywhere
- ✓ Scan devices using your smartphone camera
- ✓ Advanced security protects your customer from unauthorised access
- ✓ Configure all device settings
- ✓ Administer multiple technicians to work for your business
- ✓ Comprehensive library of alarm panel manuals built-in
- ✓ Quickly add end users to the AlarmLINK app
- ✓ View and filter live history of alarms, polls, poll fails and tech activity

✓ TechTools Web now available at techtools.suretek.com.au

Efficient Setup and Management

TechTools provides technicians with a faster way to set up and manage all of the BMC-3G devices and end customers.

1.

Install the BMC-3G

Connect the BMC-3G Alarm Communicator to your Bosch alarm panel.

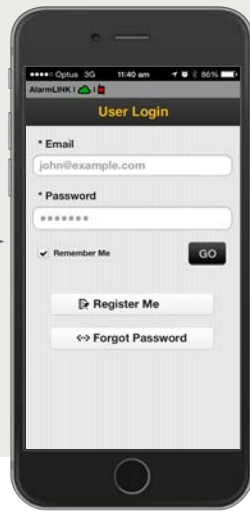

2.

Configure with TechTools

Use techtools.suretek.com to configure the BMC-3G using a standard web browser.

Add customer's to AlarmLink to create a login for them. They then receive an email with AlarmLINK download url.

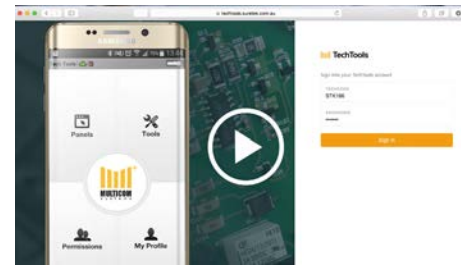

3.

Setup AlarmLINK

Your customer downloads AlarmLINK and then enters their login credentials.

They'll immediately see the BMC-3G with your branding applied and can start viewing alarm history and perform arm/disarm of the panel.

Educational Tutorials & Podcasts

TUTORIAL: How To Program Your BMC-3G - PART 1

Before you start programming you will need to obtain a TechCode that will enable you to log into the TechTools site - www.techtools.suretek.com

TUTORIAL: How To Program Your BMC-3G - PART 2

Once you have obtained your TechCode, you can then log into TechTools and start programming your Bosch panel.

PODCAST: An interview that discusses what options bureaus should consider in terms of wireless and fixed line redundancy. This podcast was recorded just prior to Telstra's shut down of the 2G network.

PODCAST: What is the future for the 1345 business in Australia and will the outcome impact rebates? Plus some general advice for installers and bureaus and what to consider before partnering with a monitoring centre.

PODCAST: The NBN is causing alarm delivery failure and increased call costs. Here we discuss how the NBN network is impacting the industry in Australia and what you can do to prepare in advance for a smoother transition.

PODCAST: While alarm communicators may look the same on the outside they differ in reliability in terms of uptime and alarm delivery. Here we discuss what bureaus and installers should be looking for in choosing the right device.
